Comments or suggestions
Thank you for this semester !! I have huge difficulties in econometrics and maths in general (I had to re take the exam last year because of my level) but I really enjoyed the way you taught us this course (even if wasn't always easy ahah) ! It was really nice to have you as a professor. I hope you also enjoyed this semester :) Keep safe and have nice Christmas holidays !
It was good , great job !
The biggest problem was that most of us did not managed to install SAS on our computers, and so we had to use SAS Studio each time, but the data isn't saved, so the best would be to find a way to install SAS on our computers.
The course was very interesting and well-explained, even with no econometrical background (for me at least). I think I would have understood the class much better if we were in presential because the thing that was very hard for me was the online classes: following the share screen, doing in the same time the formulas on sas and listening to the explanations while trying to take some notes was quite hard, as I only had one small screen and that I had no econometrical background (it sometimes took me some time to understand the course and the explanations, which then made me late for the next explanation...) But I understand as well that we all had different levels in econometrics and that going slower would have been less nice for those who have more knowledge in econometrics. Thank you for this semester!
Best course / teacher of the year.
This course was very interesting and useful and I really enjoyed it! Professor was explaining everything deeply and understandable. I really thankful to Ms. Garrouste for this course!

The thing I appreciated more was the immediate practical application of the theoretical concepts

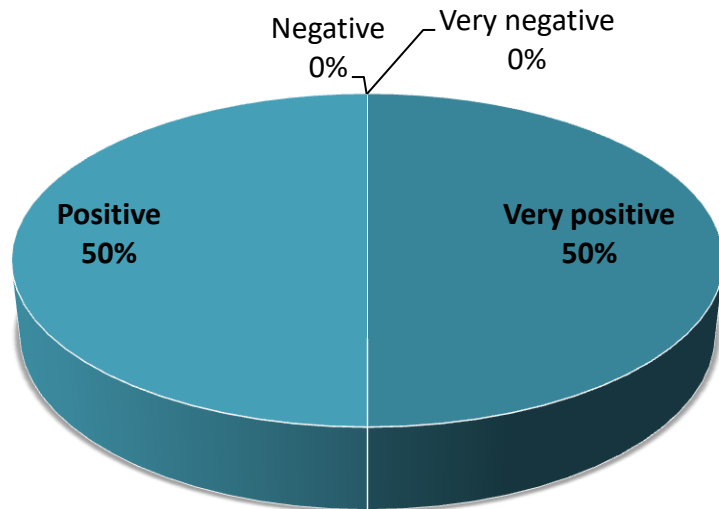

il faudrait peut être avoir une partie d'introduction au logiciel SAS, par exemple lors de l'étude des bases de données ne pas les donner direct en format sas mais plutôt en csv ou autre ce qui permettrait de voir la procédure import qui a du être compliqué pour les personnes n'ayant jamais fait cela lors du dossier à faire

Before Madam Garouste's lectures, I didn't like econometric. But her way to teach us and bring us to a result made me appreciate this discipline. And understand the utility of econometric too.
